

# SAVE THE DATE

## 2019 CRACKING SYMPOSIUM

October 15 - 16, 2019

Sugar Land Marriott  
16090 City Walk, Sugar Land, TX

The pipeline cracking threat continues to be one of the most important and difficult challenges that pipeline operators face. The second year of this event features invited speakers from operators and service providers who will describe how new technology and non-traditional thinking can make pipelines safer. Senior experts from operating companies will share their views in panel discussions.

Likely Topics include:

- Probabilistic methods, including recent JIP activity.
- New approaches for optimizing dig programs that reduce cost and increase safety.
- Emerging technology for crack detection and sizing.
- Material properties for flaw assessment.
- Next-generation fracture and fatigue models.
- Evaluation of ILI reliability and accuracy.

**Detailed agenda and registration information to follow.**
